ENG 1P13. Computing 5 Lab, Build 1 Activity. McMaster, 2026

Trace the code on the right and document the order of lines that are called, the values of the variables at each line, and what is printed at the end of the program:

```
1. a = 150
2. b = 7
3. while a > b:
4.     c = 90
5.     while c > b:
6.         b *= 3
7.         c//=2
8. print(a, b, c)
```

Line	a	b	c	(a > b)	(c > b)	Output
